Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period **will** apply and **will** expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply **will**, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

1. Claims 28-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

“A program product” as claimed in claims 28-30 was not described in the specification.

Allowable Subject Matter

2. Claims 1-5 and 19-21 are allowed.

Independent claims 1 and 19 are allowed because the closest prior art, Park (US 2003/0158922 A1) teaches a non-volatile storage device storing an identification information that indicates that an identification information network connection (see par. 0023; comparing SSIDs of the received beacon signals with SSID set in the wireless LAN card to detect an access point having the same SSID as the SSID set in the wireless LAN card). However, Park (US 2003/0158922 A1) does not teach a non-volatile storage device storing an information that indicates that an access point for a connection to the network is a hidden access point, as pointed out and argued by applicant.

Claims 2-5 depend on claim 1. Therefore, they are allowed.

Claims 20-21 depend on claim 19. Therefore, they are allowed.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lynch et al. (US 5,586,338) discloses automated scanning of access points.

Takayama et al. (US 2002/0025810) discloses automated scanning access point.

Wu (US 2003/0200455) teaches method applicable to wireless Lan for security control and attack detection.

Bridgelall (US 2002/0085516) teaches automatic and seamless vertical roaming between wireless local area network (WLAN) and wireless wide area network (WWAN) while maintaining an active voice or streaming data connection: systems, methods and program products.
